

Desktop as a Service

STANDARD

RackTop's Desktop as a Service (DaaS) solution provides secure enterprise hosted desktops and applications that fit your budget. Here's what makes our Standard DaaS solution the clear winner above the rest.

With RackTop DaaS, there is no need to manage servers, hardware or software updates. Your desktops and applications are delivered and managed right from our secure, private cloud.

With our pay-as-you go model, your business can make the shift from capital expenditures to a predictable monthly or annual expense. Scale up to quickly to meet seasonal needs, expand to new locations, or provide secure access to contract or temporary workers. Adjust your desktop needs as your business needs evolve.

Keep employees productive and happy with the freedom to work on the device they prefer. Welcome the BYOD (Bring Your Own Device) trend with hosted desktops and apps that are accessible from tablets, smartphones or laptops.

Keep your business moving – even during disruptions that used to mean major productivity loss. With RackTop, you can access cloud-hosted desktops and applications even during natural disasters, severe weather, illness and other unpredictable events.

Configure the desktop environment for every individual and situation your business requires. RackTop makes it easy to address key security and compliance concerns by ensuring the appropriate access level for each employee or group. Information created or accessed by contractors and seasonal employees never has to leave the data center. It stays safe with the hosted desktop.

Eliminate the time-consuming and painstaking need to patch and update every desktop. With RackTop's modern, efficient, and secure approach, a freshly patched and updated desktop is ready for every user each time they log in.

Deploy new software, applications and updates that in minutes – not hours or days. RackTop DaaS can prevent application compatibility issues through our specialized segmentation and isolation architecture and allows for the quick removal of retired software.

Make Operating System (OS) migrations a thing of the past. When you're ready to move to the next OS, your users simply log out and log back in to a new operating system that has the compatible applications ready to go. The user's data is still available, and your business keeps moving.

Eliminate the burden that comes with maintaining an end user environment. Switch to RackTop's DaaS for data security and simplified compliance with the lowest total cost of ownership. Layers of protection, segmentation, robust auditing and alerting assure the highest level of security.

Core Features:

- Cloud-based desktop and app access
- Endpoint device flexibility
- Low operational cost
- Predictable pay-as-you-go cost model
- Create new desktops in minutes
- Expands quickly to meet business needs
- Business continuity / disaster-ready
- Secure and reliable
- Compliant with FINRA/SEC/CGIS/HIPPA/PCI
- FIPS certified encryption
- Secure connectivity between endpoints and the cloud
- Support for local printing and scanning
- High availability with geo-redundancy
- Web filtering
- IDS/IPS intrusion detection and prevention systems
- Microsegmentation and isolation
- Eliminates costly desktop support tasks and better utilize staff
